2nd step: building the sofa

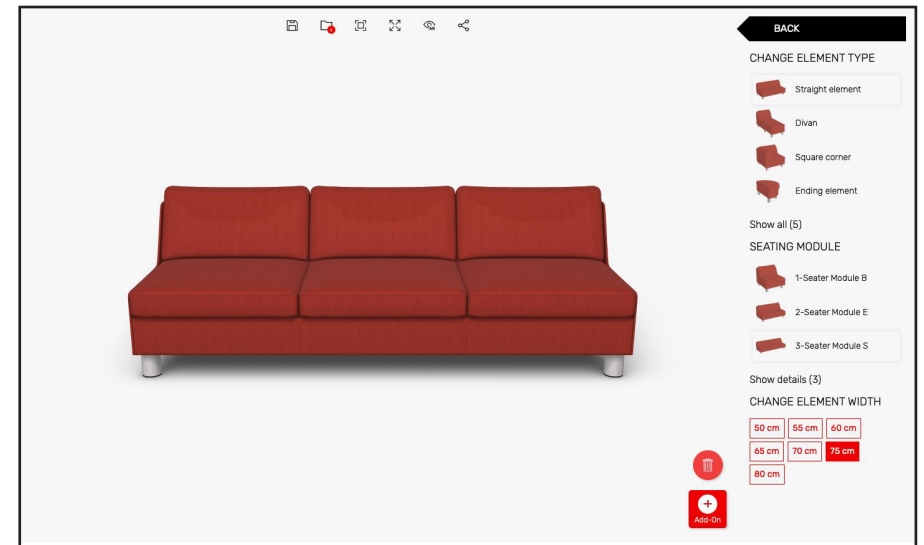

- First you create the visual design, then you adjust the sofa's desired measurement, comfort, colours, textiles etc.
- Click on the module to design your sofa.

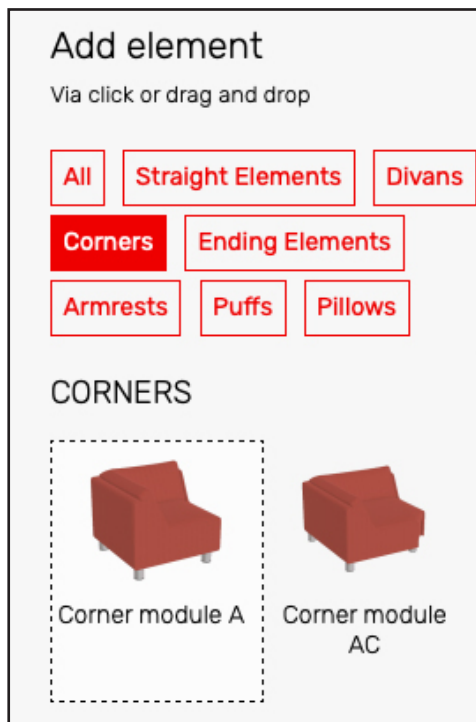

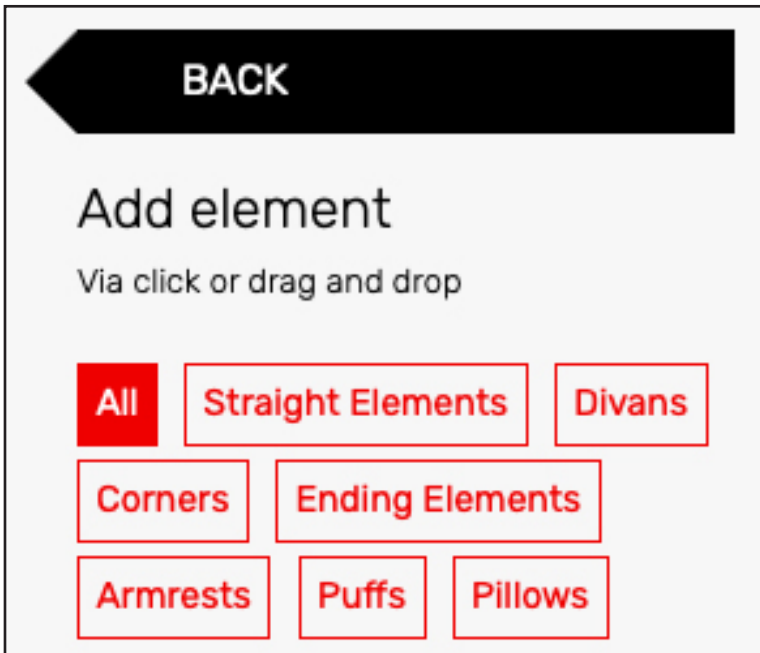

- The design of the sofa begins by choosing the module you want to start with from the options on the right hand side.

- When the sofa has the desired amount of modules, it is possible to add corners, chaise longue, armrests, etc.
- When you have chosen your “starting module”, you click on ‘Add-On’.

- First you click on the element you wish to add – in this case a corner module.
- Next you choose the corner module out of the seven different options.
- After you have selected a corner module, you click on the grey box with your desired placement.

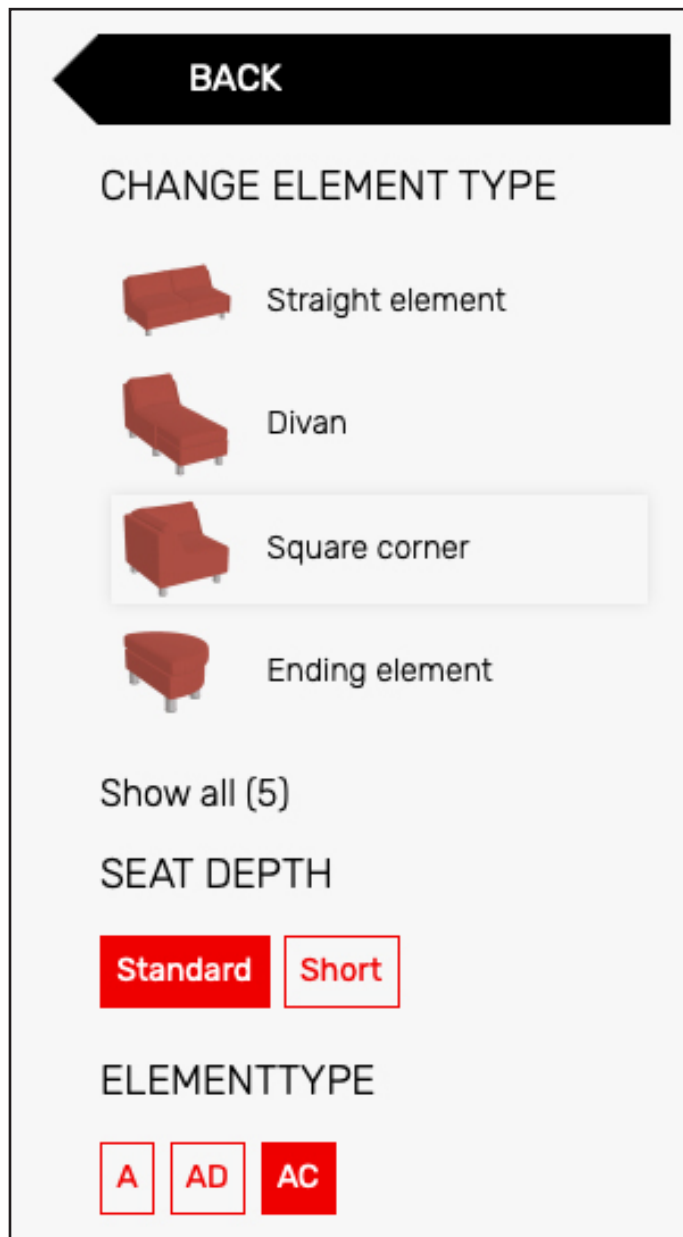

- If you want another corner module or element, you simply click on the module you want to change.

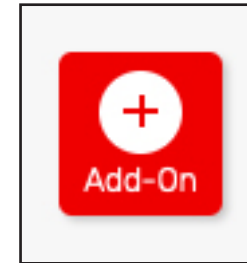

- When you click on the module you wish to change, a few options are going to be visible on the right hand side.

- You can now choose between the different options and see the changes instantly.

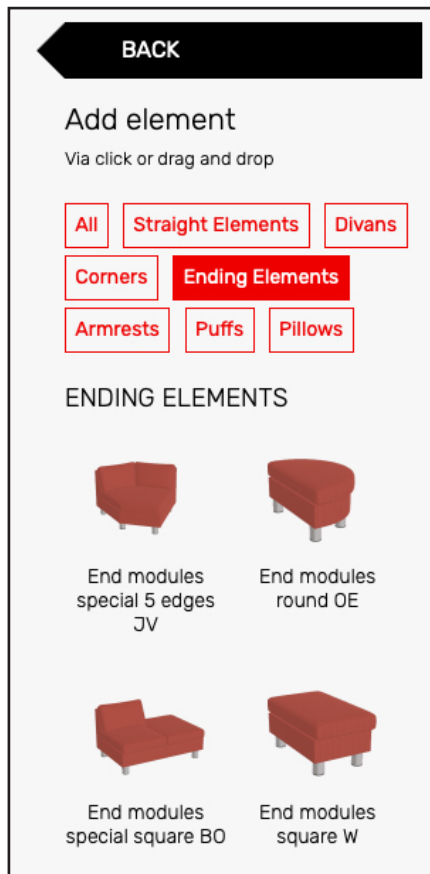

- By clicking on 'Add-On' you can add another module to the corner that you have just added.

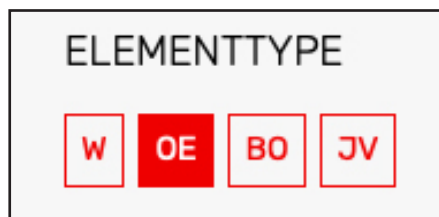

- In this example another module is added. The procedure is the same as before.

- An end element is added in this example in order to conclude this side of the sofa.

- There are four different end elements.

- Click now on one of the four modules, and choose what grey box you want to place your module in.
- You can change the element type by clicking on the end element.

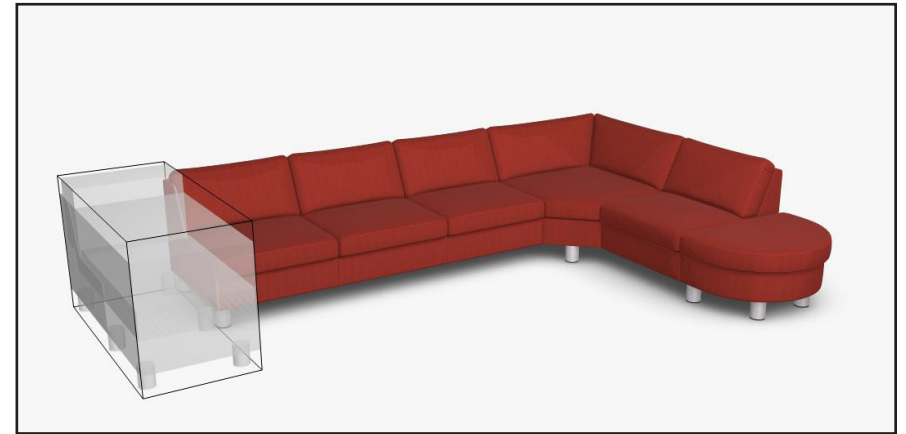

- When you click on the different types of elements the visual design changes.

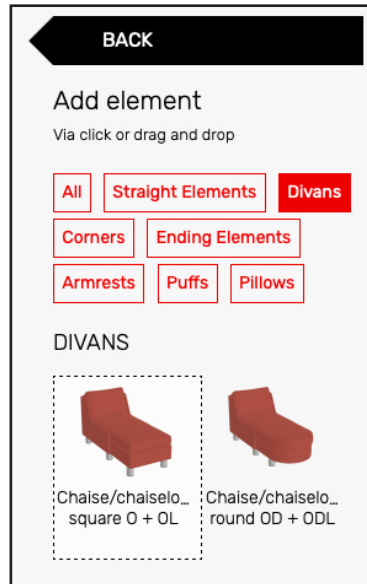

- Once again, you click on 'Add-On' if you want to add onto a module in the other corner of the sofa.

- Follow the same procedure as earlier.

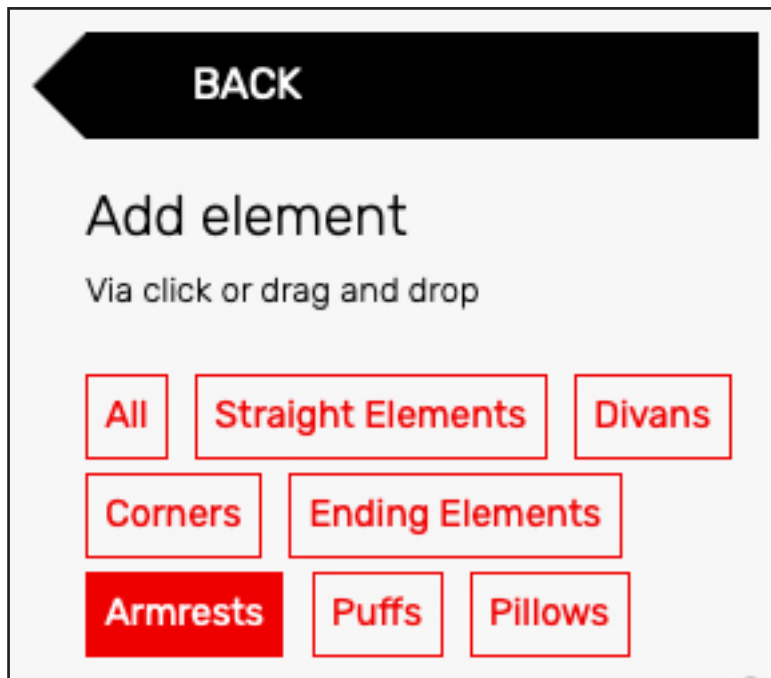

- In this example a chaise lounge is added.
- Choose now the desired module.

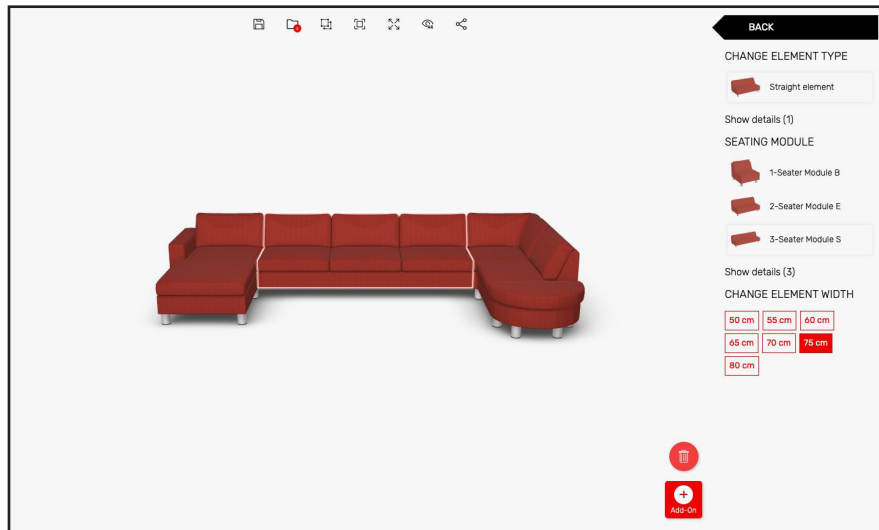

- When you have added on the desired diva, you can add on an armrest to finish the sofa. You do this by clicking on 'Armrests' in the right hand side.

- The procedure is the same as earlier. When you have chosen an armrest, another grey box appears, where you can place your element.

3rd step: modification of measurement

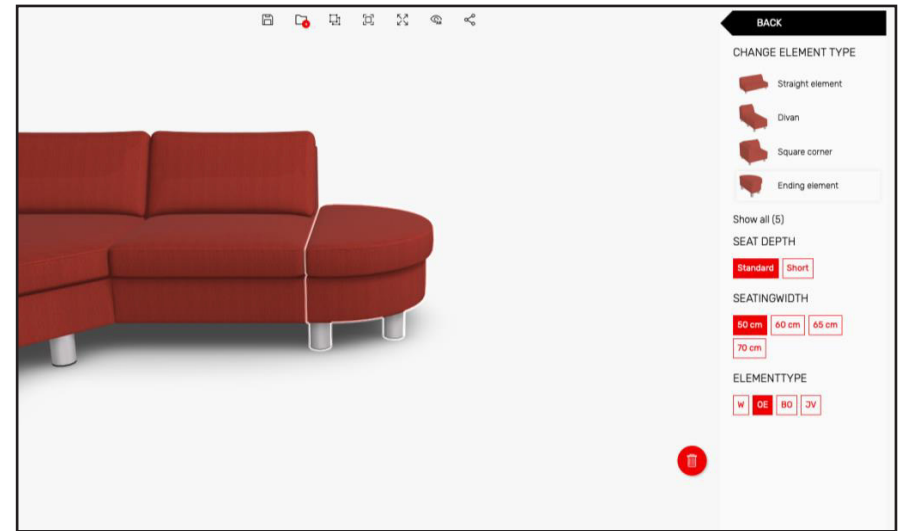

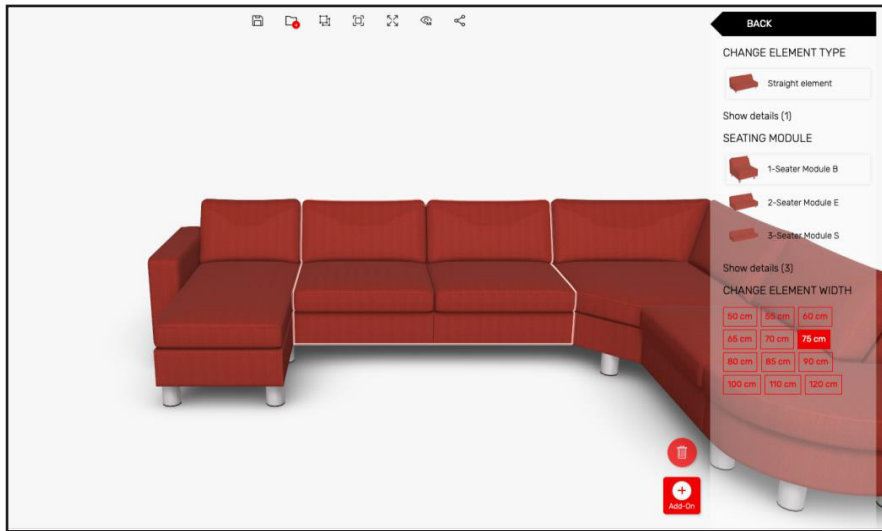

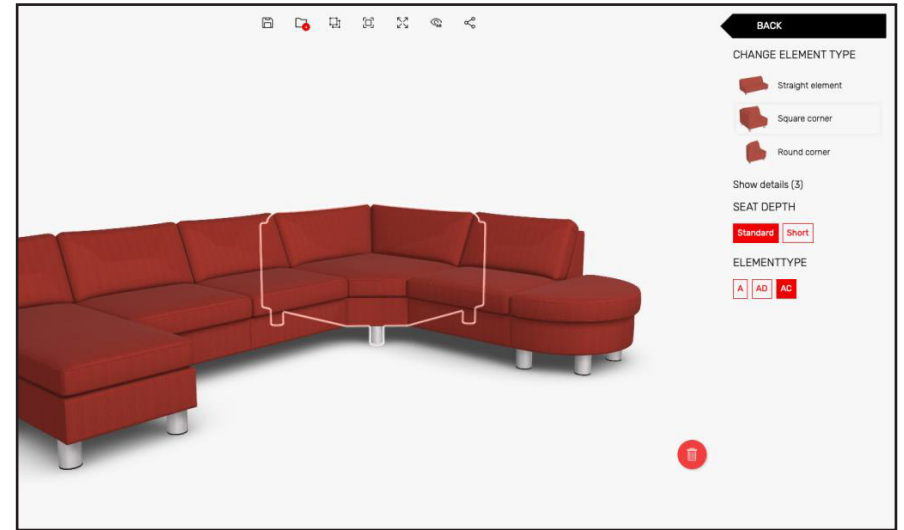

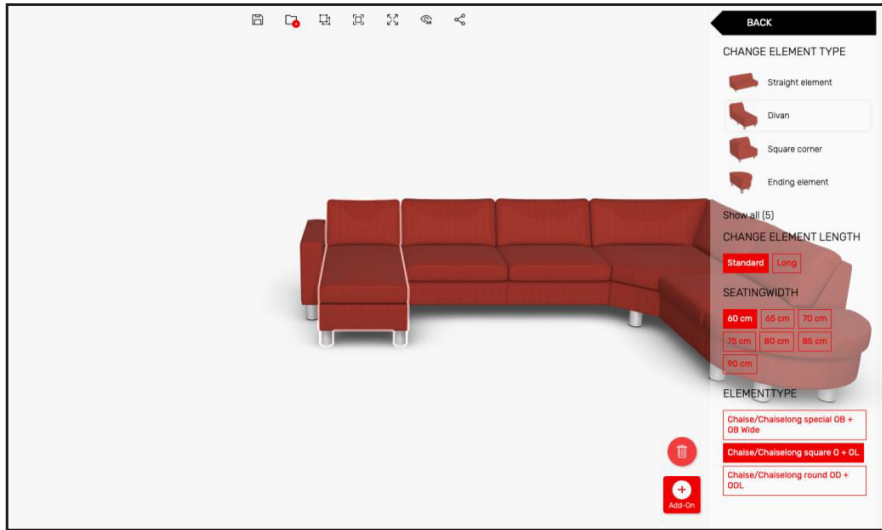

- If you wish to modify the elements, you click on the module you wish to modify.

- You only get various options in correlation with size and modules.

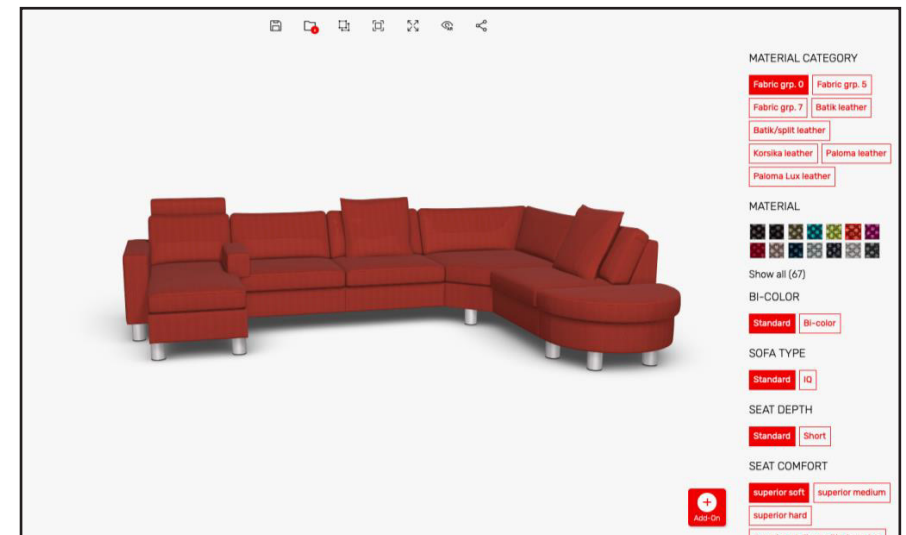

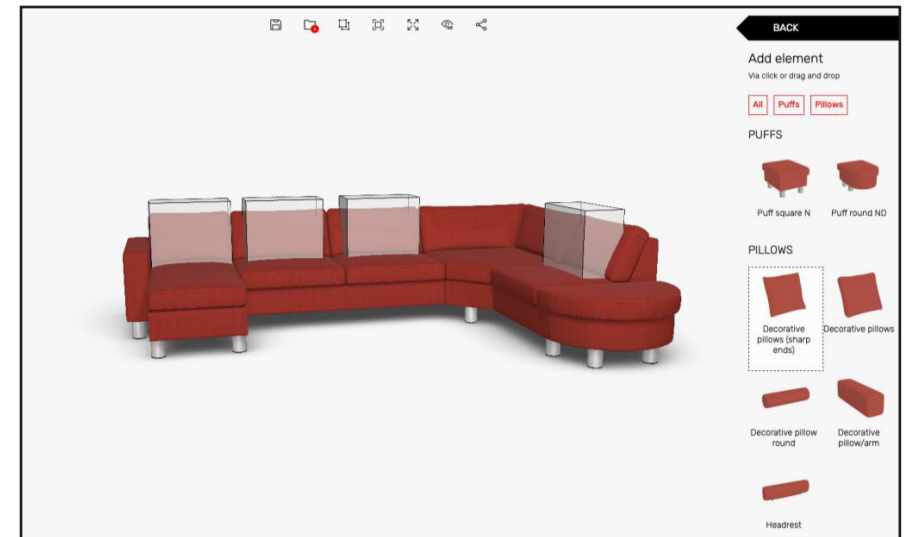

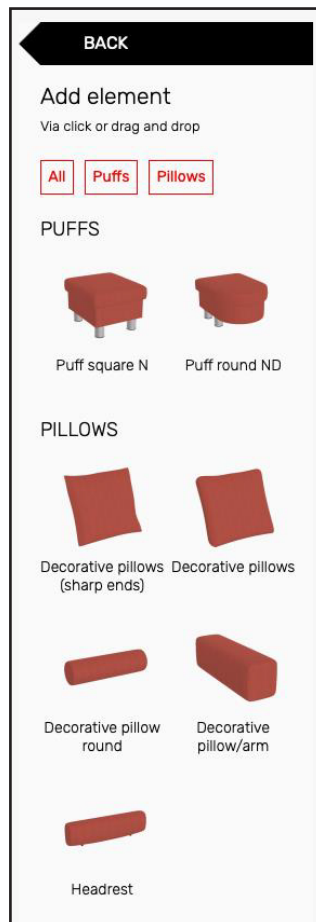

- This sofa has become too long and therefore the long side is modified from containing a straight element with three seats to a straight element with two seats.

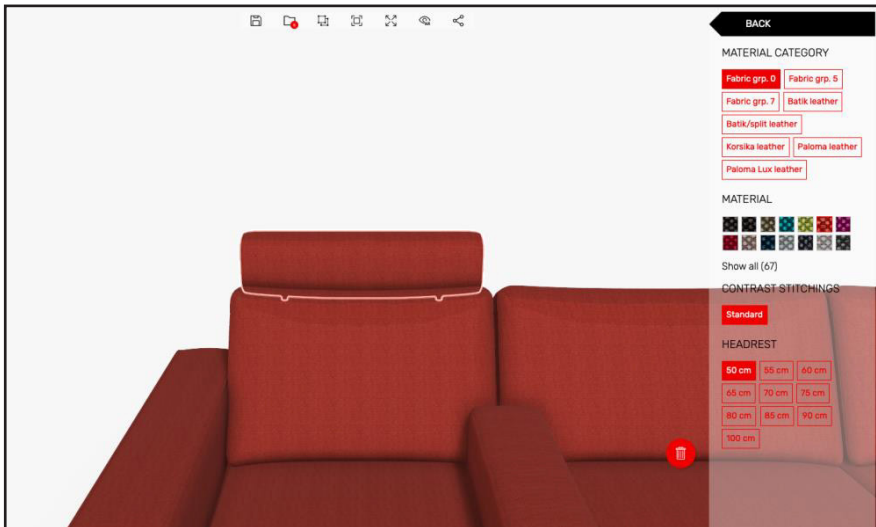

4th step: headrest, pillows and puffs

- In order to add any of these, you click on 'Add-On' and then on the element you wish to add.
- Then click on the grey box to choose your desired placement.

- These elements can also get modified by clicking on the element you wish to change.

- The design is now ready to have its material and colour adjusted.

5th step: material and colour

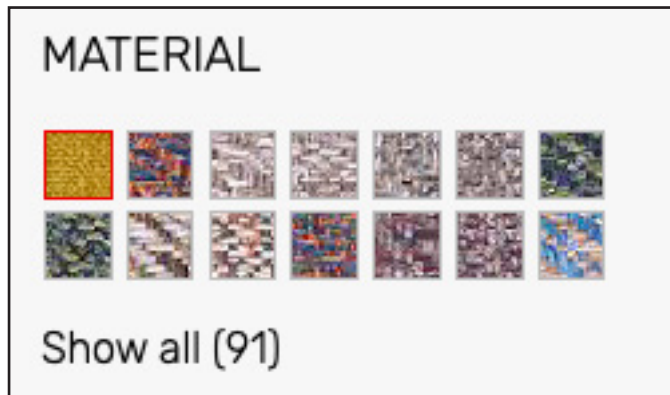

- Click on 'Back'

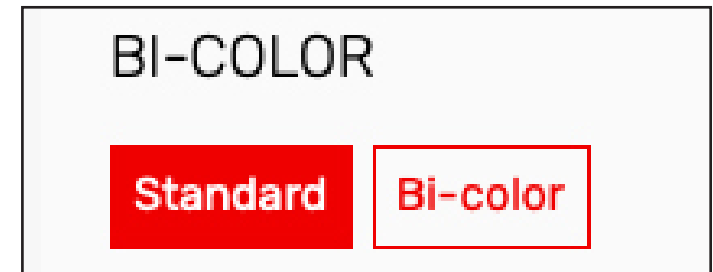

- There are 3 textile categories and 5 leather categories.
- The material is changed by clicking on the various categories at the top.

- After the desired material have been chosen, there is a variation of different colours under each material categories.
- By clicking on 'Show all' it is possible to view all the available material categories.
- Now choose the desired colour.

- It is possible for the costumer to have a 'bi-colour' for the sofa. The costumer is able to choose two different colours.
- The procedure of choosing 'bi-colour' is the same as with the original colour choosing.

6th step: sofa type, seat depth, seat comfort and foam

- Choose between the two sofa types.

SOFA TYPE

Standard IQ

- Choose between the two seat depths.

SEAT DEPTH

Standard Short

- Choose the customer's desired seat comfort.
- Make sure the customer tries the different comforts.
